

Endpoint

The Endpoint will receive POST requests when a user interacts with your Alexa Skill. The request body contains parameters that your service can use to perform logic and generate a JSON-formatted response. Learn more about AWS Lambda endpoints [here](#). You can host your own HTTPS web service endpoint as long as it meets the requirements described [here](#).

Service Endpoint Type

Select how you will host your skill's service endpoint.

- ☐ AWS Lambda ARN 
(Recommended)
- ☒ HTTPS 

Default Region 
(Required)

https://myconceive-test.eunngrok.io/ask

My development endpoint is a sub-domain of a domain that has a wildcard certificate from a certificate authority 

North America
